

Project Pitch: **Uncooked**

CSCI 577A - SOFTWARE ENGINEERING

Problem & Pain Points

Interview Prep is Broken

It is a time-consuming process requiring study, company research, and tailored responses.

- ✗ **Overwhelming Work:** Applicants, especially grads, lack direction on where to start.
- ✗ **Missing Context:** Generic lists fail to incorporate company culture or specific role requirements.
- ✗ **Generic Tools:** Platforms like LeetCode lack specific job role sorting and often have paywalls.

Proposed Solution

Input

User simply pastes a job posting text or URL into the platform.

Process

System extracts role, skills, and company context to understand specific requirements.

Output

Generates tailored Behavioral & Technical questions with STAR-format answer guidance.

Value Proposition

Core Values

Eliminates Manual Research: Speeds up the process by automating background checks.

Personalized Prep: Uses the specific job posting to provide questions relevant to ANY job seeker.

Differentiation

Context-Aware: Unlike generic sites, our advice is specific to your experience relative to the job.

Automated Speed: We replace slow, manual sorting with instant, AI-driven structure.

MVP Scope

In Scope (Core Features)

- ✓ Simple email signup flow.
- ✓ Research on company culture & projects.
- ✓ Tailored interview questions (Behavioral/Technical).
- ✓ AI assistance for answer feedback.

Out of Scope

- ⊘ Dashboard of applied jobs.
- ⊘ Auto-storing job descriptions.
- ⊘ Custom themes or dynamic layouts.

Architecture & Stack

High-Level System

User pastes job URL → Edge Function parses & extracts requirements → OpenAI generates tailored questions → Results cached in PostgreSQL

Tech Stack

Key Technical Risks

- ⚠️ **AI Hallucinations:** Mitigate with structured prompts and validation.
- ⚠️ **Latency:** Stream responses, use loading states and caching.
- ⚠️ **URL Scraping:** Fallback to pdf parsing, multiple parsers.

Turborepo monorepo for shared types & utilities

Quality & Engineering

Agile Process

-  **Scrum Methodology:** Bi-weekly sprints with backlog tracking.
-  **Code Reviews:** Mandatory for all major changes.
-  **AI Review:** AI generated code reviewed like human code.

CI/CD & Testing

-  **Automated Testing:** Unit and integration tests for backend & UI.
-  **Pipelines:** Automated builds, linting, and testing on commit.
-  **Deployment:** Continuous delivery to staging/prod environments.

Team Structure

Roles & Responsibilities

 **6 Backend Engineers:** API, Database, and AI Integration.

 **4 Frontend Engineers:** UI/UX, State Management, Client Logic.

**All members have Full Stack experience.*

Collaboration

Structured startup-style environment with daily standups, clear ownership, and cross-functional pairing.

Why This Team?

The Problem Matters

Job seekers waste countless hours on prep that doesn't work.

Each posting is unique, but tools treat them all the same.

Why Us?

 **Shared Pain:** We've all experienced the generic prep struggle.

 **Balanced Skills:** Strong mix of BE and FE talent.

 **Structured:** Rigorous adherence to Scrum & CI/CD.

Success Definition

MVP Functionality Achieved

Complete Documentation

Functioning product that reduces prep time
